Table 11: Description of optional Match Meta CDF. Note that {i} is used as an index for the items in a list.

Root	Field	Description	Type
competition	name	Name of the competition	String
competition	format	Specifying the competition set-up such as league_18 (i.e., league involving 18 teams), league_20, knock_out_neutral, etc.	String
competition	age_restriction	Age restriction for the competition (e.g., 'U18', 'U20')	String
competition	type	Type of competition (e.g., 'youth', 'mens', 'womens')	String
season	name	Season name (e.g., '2022/23')	String
match	round	Round of the match (e.g. 1, 2, 3, final, semi_final)	String
match	scheduled_kickoff_time	Scheduled kickoff time in UTC	String
match	local_kickoff_time	Local kickoff time	String
match/misc	country	Country where the match is played	String
match/misc	city	City where the match is played	String
match/misc	precipitation	Precipitation during the match in millimetres	Integer
match/misc	is_open_roof	Indicates if the roof is open (true) or closed (false)	Boolean
venue	name	Name of the venue or stadium	String
venue	turf	Information on the turf of the stadium (natural, natural_reinforced, grass, clay,...)	String
meta/landmarks	skeleton	Skeletal hierarchy used (i.e., what landmarks are tracked, and how they are connected). Required when the meta data is associated with skeletal data. An explicit example of how to provide this data can be found in Figure 7	JSON Object
teams/{home|away}	name	Name of the team	String
teams/{home|away}	jersey_colour	Jersey colour of the team as a hexadecimal color code (e.g. #545B62).	String
