Table 9: Description of the optional Event CDF fields. If included, these fields are recorded once per event.

Root	Field	Description	Type
tracking	frame_id	Frame identifier from the tracking data related to the event at (x, y) as described in 3	Integer
tracking	frame_id_end	Frame identifier from the tracking data related to the event at (x_end, y_end) as described in 3	Integer
tracking/player	x	x location of the player committing an event according to the tracking data. For example, player committing a pass, or making a tackle (m)	Float
tracking/player	y	y location of the player committing an event according to the tracking data. For example, player committing a pass, or making a tackle (m)	Float
event	match_clock	The match clock as a string in format "MM:SS.mm" (i.e. minutes, seconds, milliseconds) (e.g. "92:01.04"). The clock resets to "45:00.00", "90:00.00" or "105:00.00" at the start of "second_half", "first_half_extratime", "second_half_extratime", respectively.	String
event/metrics	xg	Calculated xG value between [0,1]	Float
event/metrics	post_shot_xg	Calculated post-shot xG value between [0,1]	Float
event/metrics	xpass	Calculated expected pass value between [0,1]	Float
event/metrics	epv	Expected possession value between [0,1]	Float
event/var	reviewed	Was this event reviewed by the video assistant referee (true) or not (false)	Boolean
event/var	upheld	Was the on-field ruling confirmed (true) or overturned (false)	Boolean
