Table 6: Description of mandatory Match Meta CDF. Any description ending with a ⋆ is repeated once per player. Note that {i} is used as an index for the items in a list. Separate ball version, name, fps and collection timing is only required when providing an independent ball file (i.e. when the ball sampling rate is different).

Root	Field	Description	Type
competition	id	Unique identifier for the competition	String
season	id	Unique identifier for the season	String
match	id	Unique identifier for the match	String
match	kickoff_time	Scheduled kickoff time in UTC	String
match/periods/{i}	play_direction	The direction of play for the home team. Possible options are left_right or right_left.	String
match/whistles/{i}	type	Whistles that start and end major periods of play such as the start and end of halves and interruptions (e.g., weather, VAR review, player health events, streakers or abandoned). Examples of types first_half, second_half, weather_delay, health_delay, injury_treatment fan_health_delay etc.	String
match/whistles/{i}	sub_type	Sub type related to an interruption, for example 'start' or 'end'	String
match/whistles/{i}	time	The time in UTC of the whistle	String
teams/{home|away}	id	Unique identifier for the home or away team	String
teams/{home|away}/players/{i}		Array of player objects. One array under teams/home, one array under teams/away	Array
teams/{home|away}/players/{i}	id	Unique player identifier⋆	String
teams/{home|away}/players/{i}	team_id	Unique team identifier denoting the team the player plays for⋆	String
teams/{home|away}/players/{i}	jersey_number	Jersey number for a player⋆	Integer
teams/{home|away}/players/{i}	is_starter	Denotes whether a player started the game (true) or not (false)⋆	Boolean
venue	id	Unique identifier for the venue or stadium.	String
meta/video	perspective	Camera perspective (e.g. 'in_stadium', 'broadcast', 'tactical', 'tactical_wide')	String
meta/{event|tracking|video|landmarks|ball|meta|cdf}	version	Version number for the data collection in use (e.g. "0.1.0")	String
meta/event	name	Vendor name of the event data	String
meta/tracking	name	Vendor name of the tracking data	String
meta/video	name	Vendor name of the video data	String
meta/landmarks	name	Vendor name of the landmark tracking data	String
meta/ball	name	Vendor name of the ball data	String
meta/meta	name	Vendor name of the meta data	String
meta/{tracking|video|landmarks}	fps	Frames per second (i.e., frame rate) of tracking, landmark tracking or video	Integer
meta/ball	fps	Frames per second (i.e., frame rate) of ball tracking	Integer
meta/{event|tracking|landmarks|ball}	collection_timing	Indicates if the data was collected live or post_match.	String
match/periods/{i}	period	Period of the match which can be first_half, second_half, first_half_extratime, second_half_extratime, or shootout	String
